EAST MARKET STREET

Streetscape Improvements

From Church Street to Murrow Boulevard

The construction of the East Market Street Streetscape – Phase 2 Improvements, Contract 2004-29, will begin next week. Construction will begin with the installation of storm sewer piping and structures which will require periodic lane closures. The remainder of construction will take place over an extended period of time, where it will be contained mainly within 800 foot sections. At times, this will require one or two travel lane closures. One travel lane will be kept open at all times. The southern most eastbound lane on East Market Street will be closed first. This will be an ongoing process that will progress along East Market Street eastwardly to Murrow Boulevard for the first segment of construction. **Please use extreme caution when traveling through this area.**
